

NEW

# Feeding systems for stationary use

Efficient and intelligent feeding with eacy feed, the new generation vibratory bowl feeder.

- Approx. 80 % energy savings
- Smart factory/Industry 4.0-capable
- Efficiency and worldwide application one design for all markets

Feed systems are essential for productivity and efficiency in automatic assembly machines. Originally developed for shaft-heavy screws, today's DEPRAG feeding systems are capable of processing screws of all types with or without washers, threaded bolts, pins, rivets, nuts, washers, o-rings and diverse other small components.

#### Efficient and intelligent feeding

The innovative feeder eacy feed provides ideal specifications for the sustainable production of tomorrow: With its approx. 80 % power saving accomplishment the eacy feed is extremely energy efficient. In addition, the smart eacy feed is particularly suitable for the challenges of smart factory/Industry 4.0.

# APPROX. 80 % ENERGY SAVINGS

- the revolutionary controller and the new drive allow for the extraordinary energy efficiency of eacy feed
- a significant reduction in power consumption is attained due to the 24 V oscillating magnets, thereby realising energy savings of around 80 %

# SMART TECHNOLOGY

- the revolutionary controller enables remote control and communication
- the eacy feed can be accessed from anywhere in the world via TCP/IP
- all settings can be displayed and adjusted at any time
- eacy feed is particularly suitable for smart factory/

Industry 4.0-systems

#### Efficiency and worldwide application

We have developed an innovative feeder in eacy feed which is distinguished by its energy efficiency and countless application possibilities. The 24 V technology of the drive enables worldwide application. All you need is a universal power supply. Country specific variations are a thing of the past. Thanks to the 24 V technology, eacy feed ensures reliable running even in areas with poor network availability.

# LOW CONSUMPTION AND TOP FLEXIBILITY

- revolutionary controller enables around 80 % less power consumption
- new controller and vibratory drive based on 24 V/DC voltage
- universal power unit (115 V 230 V)
- independent from the local alternating current frequency
- one design for all markets

# PERFECT VIBRATION INTENSITY

For monitoring and regulation of the vibration intensity an acceleration sensor is mounted on the vibratory drive.

- ensures stable output, independent from fill-level
- no need for readjustments
- supports ideal vibration behaviour and minimises material wear
- simplified reloading procedure
- accommodates all bowl sizes

Smart factory/Industry 4.0 can be found in all branches of industrial production. Intelligent, integrated smart components are in demand throughout the entire value chain. With the development of the innovative controller PFCi100 we are realising smart factory/Industry 4.0, the fourth industrial revolution. PFCi100 enables remote control, documentation and interaction with eacy feed, enabling the device to be monitored and controlled from anywhere in the world.

# Integrated functions of the PFCi100

- » external master IPC (e.g. DPU100) operational platform
- » enables remote control and communication
- » bus interface

FLEXIBLE USE

- » adjustable via IPC (DPU100)
- » communication via TCP/IP
- programmable via integrated web browser

# **Operator platform DPU**

The DPU (DEPRAG Processing Unit) provides exceptional user-friendliness. Settings can be simply adjusted via the slide bars on the touch screen.

# **DPU** setting options

- » frequency
- » amplitude
- » acceleration ramp
- » soft start
- » waveform

Used in assembly systems within complex automated production lines – eacy feed precisely and reliably supplies connection elements. If eacy feed is used in conjunction with the control and operating unit DPU (DEPRAG Processing Unit) an additional industrial demand is fulfilled: Communication capabilities for Industry 4.0 and Smart Factory.

The use of TCP/IP network protocols allows access to the EACY Feed controller's network from anywhere in the world. All settings can be displayed or adjusted once a connection is established with the smart EACY Feed using a smartphone, tablet or computer. The operator can for example, alter the frequency and amplitude settings via their smartphone so that function of the feeder can be guaranteed from any location.

# SIMPLER FOR THE FITTER AND OPERATOR

The corresponding software PFCi100 has been developed alongside the control unit DPU for maximum user friendliness. The parameters required for the device can be simply and easily adjusted using the slide bars on the touch screen – there is no need to access the feeder's sequence controller.

If several operators are using the same feeder at the same time, the efficiency of the process can often be compromised by the varying working speeds of each individual. DEPRAG feeders cleverly adapt to the individual working speeds of each operator. Once entered via the simple display, the specific operating parameters of each person are saved (storage of up to ten data sets) and can be recalled when there is a shift change. No one feels held back and no one feels overstretched.

### PRECISION AND TIMING

The fill volume influences the feed rate in standard vibratory spiral feeders. If the feed bowl is full, the system works at a slower rate and if it is emptier the rate speeds up. As with the previous generation, the eacy feed is also fitted with a measurement transducer which records the oscillation amplitude in the feed bowl. This thereby adaptively regulates the feeder depending on the fill volume – ensuring reliability as the screws are continuously in readiness for processing.

The feed rate is adjustable using twelve different waveforms. The amplitude or frequency can be set in an instant. Individual settings can be used for example, to optimise the feed volume or reduce the noise level of the feeder. The adjustments can be carried out quickly and without mechanical intervention. When using eacy feed the required settings can simply be selected on the DPU.

# Integrated sequence control

For stationary applications using screws or screw-similar fasteners, we offer screwfeeding systems with integrated sequence control (our EP version). This design is used if you want an extensively tested and proven system but do not want to use your own PLC or where your PLC has insufficient capacity.

#### Freely programmable

Parts with a multitude of varied geometries can be processed with a freely programmable feed system and the pneumatic and electric equipment based on your requirements.

# Simple integration and start-up procedure

The integration of your host PLC with DEPRAG stationary screwfeeders is exceptionally simple and easy. Many design details, such as the quick-release feature of the separator or the tiltable or removable housing, simplify handling during start-up or maintenance.

#### Large output capability

DEPRAG feed systems have a particularly large output capability - they accelerate your assembly cycle whilst guaranteeing continued high quality.

#### High reliability

The sophisticated design of all feeders, the use of high-alloyed and heat-treated steels for all mechanically critical components and the required quality of the components to be transported, are the foun-dation for the high quality of our equipment.

# Vibratory Feeder

Stationary feed systems for the processing of small components of all kinds, such as screws, pins, bolts, rivets, nuts, washers and o-rings. Vibratory feeders feature a high output rate in comparison to other feed systems.

We offer stationary screwfeeders with vibratory drive for screws < M1 to M20. Screws with a shaft length from 5 mm up to 130 mm can be processed.

Even countersunk screws can be fed easily by our vibratory feeders.

#### **Design Sizes:**

0.05	l Feed volume	Page	11
0.15	l Feed volume	Page	12
0.75	l Feed volume	Page	12/17
1.2	l Feed volume	Page	13
2.50	l Feed volume	Page	14/17
6.0	l Feed volume	Page	15
2.0	l Feed volume	Page	15

# Sword (Segment) Feeder

Sword feeders or segment feeders are used when the requirement calls for gentle, almost noiseless feeding of sensitive fasteners. Our sword feeder systems can process screw sizes from M2 to M6. They are ideal for screws up to 25 mm in length. Sword (segment) feeders are also well-suited for the processing of balls and pins.

#### **Design Sizes:**

0.15 | Feed volume 1.50 | Feed volume Page 16 Page 16

# Linear Conveyor

Linear conveyors can be used to transport parts over larger distances within your assembly system, to allow for a parts buffer or to allow for the constant and consistent flow of parts.

Our robust linear conveyors enable correct sorting in the feedbowl, thereby preventing jams or parts becoming wedged or backed up to the feedbowl.

# FEEDING SYSTEMS FOR STATIONARY USE

If the screw dimensions do not allow feeding through a feedhose, for example where there is an unfavorable relation between screw head diameter and overall length, we can offer special solutions, such as the pick-and-place procedure with vacuum suction or removal by gripper. This process can also be used for screw locations which are difficult to access.

#### The DEPRAG tape-on-reel feeder is specifically designed for the reliable and accurate feeding of adhesive components, which are supplied on reel tapes.

→ Catalogue D3870E

The DEPRAG screw presenter is ideal if you need a quick solution to automate your assembly, but an automatic screwfeeder is not feasible because of the low number of screws to be processed. In such as case screw presenters are wellsuited for the automatic presentation of screws to allow pick-up with a handheld or stationary screwdriver.

Do your operating staff frequently have to refill your feeding equipment to stop pro-

duction running to a halt? Or does your feeder run inconsistently and you would like to optimise the process? In these situations we recommend the

In these situations we recommend the use of our storage devices, such as the DEPRAG belt-driven hopper.

→ Catalogue D3850E

→ Catalogue D3840E

# Pick-and-Place Feeding

#### **Tape-on-Reel Feeding**

# Screw Presenter

# Storage Devices

# 6 FEED MATERIAL

Different parts and connectors often also require different feeding technologies. Here you can find a small sample of different components matched with the appropriate DEPRAG feeder:

#### Screws

For the processing of screws, de-pending on size, we recommend a vibratory feeder or a sword (segment) feeder. To make the first step toward automation of your assembly process, we recommend our screw presenter.

# Pins

For the processing of pins, we recommend a vibratory feeder. For standard applications we can offer handheld feeding systems. An adapted separator is often used for stationary applications.

#### Nuts

For the processing of nuts we recommend a vibratory feeder. We can provide standard systems for handheld and stationary applications.

# O-Rings

For the processing of o-rings we recommend a vibratory feeder.

Our feed systems can be implemented as part of an assembly solution into stationary machines. The o-ring will be supplied to the pick position and then handled and positioned by the assembly system.

# Components

We are able to sort and process many different types of components with our vibratory feeder in combination with a linear conveyor. The use of sensors allows us to process components with varying geometries in our stationary feeding systems.

# Small components supplied by reels

The DEPRAG tape-on-reel feeder is designed for the delivery of adhesive components (e.g. seals), which are supplied on reel tapes. These adhesive components can be lifted from the pick-up location by vacuum or gripper. This type of feeding system allows the processing of both single-sided and double-sided adhesive components.

# Labels

Labels, tags and films are primarily supplied on reels. A DEPRAG tape-on-reel feeder is recommend to lift them using vacuum suction.

#### Parts to be press-fitted

For the processing of rivets, pins, sleeves and balls, we can offer our standardised press-fit systems consisting of a pressurised device connected to either a vibratory feeder or sword (segment) feeder.

# **FEED MATERIAL**

Sword (segment) feeders are especially suited for gentle feeding procedures. Vibratory Feeders can also be coated with a fibre coating or soft PUR-coating which protects the surface quality of your components. A storage device can be set to keep the filllevel of the feeding-system to an absolute minimum which again serves to protect the surface qual-

ity of your components. If your components need even gentler handling then we can palletise them and process them by a gripper or vacuum handling system. Please contact us for additional information.

#### Part assembly in cleanrooms

A vibratory feeder in connection with a suction device can be used to process components in cleanrooms class D. If your cleanroom requirement is even higher, then a palletised solution with gripper or vacuum handling can be used.

# STRUCTURE OF STATIONARY SCREW FEEDING SYSTEMS

DEPRAG screw feeders consist of the supply system itself, an air connection, a power switch and an electronic controller including feedhose, in standard length 4m.

# 8 FURTHER ADVANTAGES OF FEEDING SYSTEMS FOR STATIONARY USE

# Positioning

By using various sorting elements (so called deflectors), the material for sorting is moved into position and subsequently processed. Material that is not correctly positioned and cannot be turned is directed back into the bowl by additional deflectors.

With a so called twin feeder, your production can be streamlined even further. One vibratory bowl can supply either two independent workstations, or, when used with pre-separation of the screw, even multiple screwdriver spindles in an assembly system. When ordering a customer specific device, you will naturally receive the necessary 3D data to facilitate easy integration into your system.

#### Simplified start-up

#### Efficient Assembly

The high level of in-house production, the use of wear resistant materials, as well as specific coating procedures during the manufacturing of the vibratory bowls, ensures consistently high quality products and the outstanding efficiency of our feeders. DEPRAG vibratory feeders feature an extremely high feed rate of up to 60 parts per minute.

# Solutions tailored to customer specific requirements

If you wish to integrate a feeder directly into your assembly system and restrictive space conditions have to be considered, then we can adapt our standard devices to your installation conditions. You profit from our unique know-how and moreover, you receive a reliable, fully-tested feeding system at a particularly attractive price-toperformance ratio. Prior to the delivery of your feeder, we carry out an endurance test which simulates your workflow during series production. Each device is delivered with comprehensive documentation, which clearly explains the start-up and operation of the feeder.

# ACCESSORIES

Distributor with hose nozzles for pre-separation of the screw

Distributor with standard hose nozzles

#### Distributor

If more than two positions (i.e. screwdriver spindles) have to be supplied out of one feeder, then so called pre-separation hose nozzles can be used. These distributors can supply 2, 3, 4, 5 or even 6 channels.

To increase the feed rate the distributors can be operated by pre-separators (version "V"). With such a system, the feed parts separator can be operated parallel to the processing time. The feeding of the hardware will be done simultaneously for all channels. This type of feed system is also used when feeding has to be done against gravity (i.e. underfloor assembly).

#### Screw Separator

The screws exit the feed bowl in a well ordered line ready to be separated at the end of a retaining rail. Different types of separators can be provided depending on the geometry of the material (e.g. screws).

# ACCESSORIES

#### Control

The standard version (version "0") of our feed system does not include pneumatic valves or a sequence controller. The vibratory feeder bowl includes the integrated control unit. The necessary pneumatics, as well as sequence controller are the essential components of a complete assembly unit. If components are ordered, the corresponding pneumatic and function diagrams are made available.

To keep design costs to a minimum and to simplify installation, all devices can be supplied with pneumatic valves. There is wiring up to the terminal block (version "P"). Again, if components are delivered we will provide an terminal plan.

The version "P" includes all necessary valves for the operation of the screwfeeding machine.

The third available version with the designation "EP" offers screwfeeding machines with 1 to 4 outlets, and includes pneumatic and electronic sequence control. To feed the next screw, only a 24 V signal is necessary. This means the customer can use a smaller PLC and no programming is necessary for the screw feeding. Therefore, the series "EP" is an especially economical and reliable solution and should be given preference.

# **Control Units**

We offer different control units to control our vibratory drives.

- Piezo controller is used for bowl sizes of 0.05 I (0.01 gal.)
- Feeder controller 5 with integrated sequence control is used for bowl sizes of 0.15 I (0.04 gal.)
- Feeder controller 5 S is used for bowl sizes of 0.15 I (0.04 gal.)
- Feeder controller PFCi100 / PFC100 is used for bowl sizes of 0.75 I (0.2 gal.), 1.2 I (0.32 gal.) and over 2.5 I (0.66 gal.) capacity

Naturally, all units conform to the protection type no. IP54. The bowl size of 2.5 I (0.66 gal.) has a soft start feature integrated into the control unit of the vibratory drive.

### **NEW: PFC18L Controller**

(IP30 protection class) to control our 1.5 liter sword feeders.

- operational voltage 24 V/DC
- little power consumption
- 10 different menu languages
- illuminated display
- power unit with extended voltage range (115 V - 230 V)
- independent from the respective local A/C voltage
- one design for all markets

PFC18L controller

# **Additional Accessories**

To complete the automatic assembly station, we provide additional components, such as:

- Standard mouthpiece
- Tiltable mouthpiece
- Nosepiece ball type, single
- Nosepiece ball type, double
- Nosepiece ball type with extension
- Nosepiece split type
- Nosepiece with attachment piece
- Ring proximity switch
- for screw presence sensors - Fill level indicator
- Feeder stand
- Base for feeder stand
- Storage devices (Catalogue D3850E)

Nosepiece

Special nosepiece with mouthpiece

STEP 4:

#### STEP 1: Feeding criteria

Basically all "shaft heavy" screws with heads which fulfil the following criteria are suitable for processing with our feed systems:

L = Screw shaft length

STEP 2: Screw Quality

DIN quality standard fasteners (allowable 3% bad parts) is not always sufficient for reliable feeding machines.

Higher levels of screw/fastener quality improve the feeder's reliability.

The goal should be a quality grade of 10 ppm ("parts per million"). This means every 100,000 screws there can be 1 bad part.

#### STEP 3: Which feeding principle is best suited to your application?

A vibratory spiral bowl is particularly suited to screws with awkward dimensions or those with special feed rate requirements. The sword feeder is used when extremely gentle handling of the parts is required or when very low noise level is a must. If feeding with a hose system is not possible we also offer pick-and-place procedure.

Determine the screw receiver

and position the screw.

Nosepiece

split type

At the end of the mouthpiece there is

a nosepiece ball type (1 or 2 rows) or a

nosepiece split type, mounted to receive

Nosepiece

ball type

# STEP 5:

Space available on the component

The available space around the screw head on the assembled components is very important for effective use of the handheld screw feeders.

Both the nosepiece split type and ball type have space requirements.

# STEP 6:

# Single or multiple feeding/screwdrivers

Single and double spiral bowls are available for vibratory bowl feeders. You can also get more out of each feeder with only one outlet using a distributor to further divide the feed parts into several hose outlets.

In this way up to twelve outlets can be created from just one feeder by using a double spiral bowl and 2 six-fold distributors. The selection of the correct feeder depends in particular on the cycle time required.

Please ask your local representative for further information.

#### STEP 7: Specifications

In order to design your feeder we need the following information from you:

- Number of screwdriving spindles to be used
- Cycle time (described in detail if possible)
- Feeding design (vibratory bowl feeder or sword feeder) if you have a preference
- Controller design (without valves as version "0", with valves as version "P" or with valves and sequence controller as version "EP")
- Details of feed part geometry (e.g. dimension sheet of the screw with tole-rances)
- Details of required length of feedhose(s) Details of the geometry of the screw-in position (3D model in format STEP or IGES)
- Voltage/mains frequency

To process your order we will also require approx. 1 sample load of parts to fill the capacity of your feeding system.

D = Head diameter

d = Shaft diameter

B

n = Space required to open

Also suitable for the feeding	of: – rotatior	n symmetric	parts, such a	as rivets, bolt	s, pins, wash	ers, sleeves,	etc.			

- small components

- balls and much more

The choice of feeding machine for small components will be determined after testing. Therefore, we require a sufficient quantity

(approximately 1 liter/0.26 gal.) of the components to be fed.

Included in delivery	Power unit 105535A

Required accessories

Power supply	V	not applicable	24				
Power consumption	VA	0	10				

# **OPTIONAL EQUIPMENT**

# for feeding systems

Stationary mouthpiece (standard)
Tiltable mouthpiece
Nosepiece ball type (single)
Nosepiece ball type (double)
Nosepiece split type
Ring proximity switch with impulse extension 100 ms, with connector, cable and connector plug
for screw presence control installed and wired
Feeder fill level indicator
Feeder bowl, coated with polyurethane
Hopper (Catalog D3850E)
Downholder (for screws with washers)
"Semi-pick and place-system"
