NEW MOTOR RANGE

High torque motors made from stainless steel:

Our ADVANCED LINE pneumatic motors are now available as high torque motors made from stainless steel. The ideal drive solution for e.g. agitators and industrial mixers.

non corrosive ATEX conform oil-free sealed
sterilisable compact insensitive to cleaning solvents

The ADVANCED LINE air motors are particularly suitable for use in the food industry, medical technology, underwater applications and the chemical industry.

Our air motors are also available in an ATEX conform complete system with integrated holding brakes.

All airmotors are made from stainless steel and can also be used without lubrication.

In addition our modular principle enables us to offer low cost customisations for your specific application!

All external parts (housing and spindle) of our ADVANCED LINE series are made from high quality non corrosive steel.

conform system: air motor - holding brake - gear

PRODUCT SPECTRUM OVERVIEW: ADVANCED LINE AIR MOTORS

Stainless steel motors with integrated planetary gears

The vane motors of the ADVANCED LINE are particularly compact drive solutions for installation in either handheld machines or industrial systems. These top quality stainless steel motors are suitable for the chemical industry, for the paper industry, the pharmaceutical industry, medical technology and also for use in the food industry.

High torque stainless steel motors

The high torque motors of the ADVANCED LINE are small in size but provide extremely high output. Our high torque motors are also less apt to stall, the stalling torque for e.g. motor type 67-517 is 800 Nm / in.lbs. These drive solutions are particularly suitable for use in industrial agitators and mixers as used in the paint industry, food industry or pharmaceutical industry.

860 W	Page 18

Stainless steel motors with integrated holding brake

Due to their size and design DEPRAG stainless steel motors with integrated holding brake are the optimal choice for use in any application where reliability plays an important role. The integrated holding brake can either be controlled using a separate control lead or via the motor exhaust. If pressure falls the brakes are automatically activated.

The big plus: This innovative complete system is also available with ATEX certification!

ADVANTAGES OF ADVANCED LINE AIR MOTORS

LONG LIFE-SPAN

A wide product range of stainless steel motors, the use of DEPRAG high performance vanes as well as a specific surface coating on our materials all this ensures your motor's long life-span.

Airmotor - gear box - valve: a stainless steel system for the paper industry, sealed stainless steel motors, high performance vanes

SHORT DELIVERY TIMES

Due to our large amount of in-house production we are able to deliver quickly and flexibly at short notice, even when dealing with smaller quantities.

Large amount of in-house production, on-site salt bath heat treatment facility

APPLICATION CONSULTANCY

Our application engineers will gladly advise you in the selection of the most suitable drive for your application. If you would like to test or replace your existing drive we can check it for you in our innovative performance testing facility.

Performance testing facility, professional guidance from our engineers

WIDE VARIETY AND COMPREHENSIVE RANGE OF ACCESSORIES

Our standard programme is distinguished by its wide variety. All our stainless steel motors are also available with threaded spindle. Additionally due to our modular principle we are able to offer numerous variations to choose from. Do not hesitate to contact us if you have a specific mounting fixture request.

Individual customisation at an attractive price

This safety valve turns off the air supply in the brake leads automatically when the pressure falls under 5 bar. This prevents an irregular temperatur increase.</p>

Pressure Regulator Valve

Of course you can also purchase individual replacement parts from us.

Our standard maintenance units are ATEX conform. Please contact us if this is a requirement.

Allowable shaft loading see page 24.

Further notes for sound-proofing see page 25.

A pressure regulator valve is included within our shipment of the ATEX conform brake motors. This safety valve turns off the air supply in the brake leads automatically when the pressure falls under 5 bar. This prevents an irregular temperature increase.

The layout of your air motor:

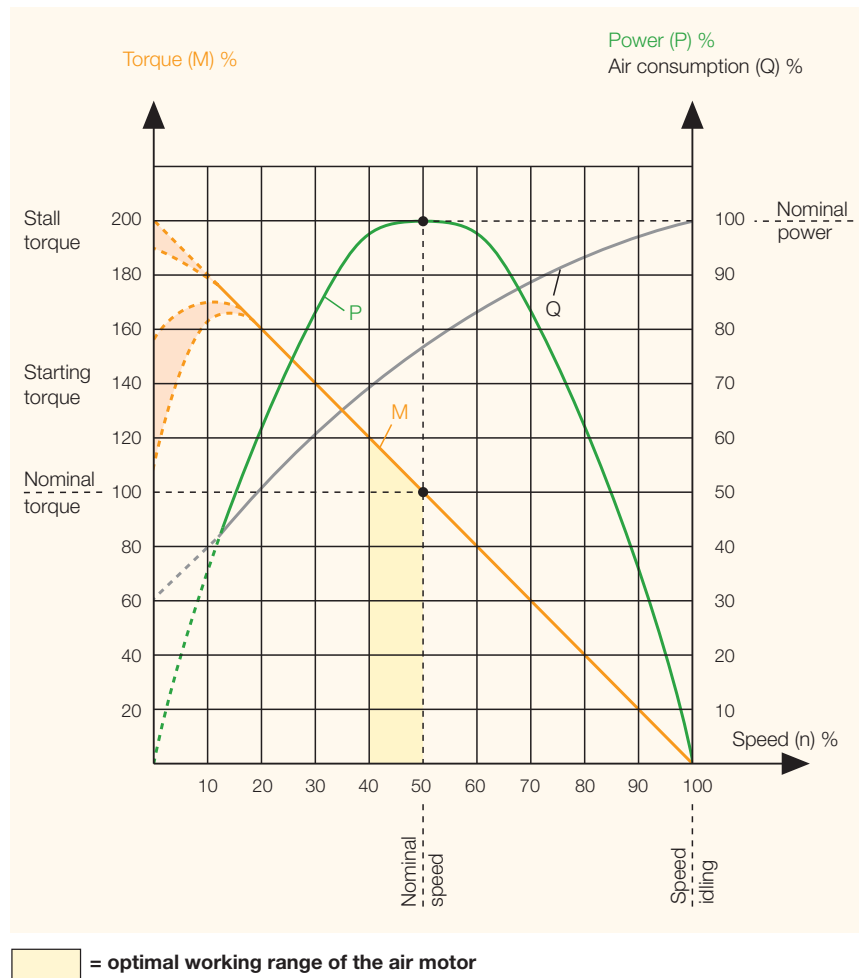

Calculating the motor power

$$P = \frac{M \times n}{9550}$$

P = Power Output in kW
M = Nominal-Torque in Nm
n = Nominal-Speed in rpm

The optimal working range of an air motor is close to the nominal speed. If you need lower speeds than are mentioned in the catalogue you can reduce the speed by throttling the exhaust air with only a slight loss of power. By throttling the supply air or decreasing the operating pressure the speed, torque and power are reduced.

All performance data of the DEPRAG air motors is based on operating pressure of 6 bar and the opening cross-section mentioned in the motor data. If your application conditions are different from this then you will find a comprehensive guide to the layout of our motors in brochure D 6000 E.
